ABOUT

Bachelor of Science in Computer Engineering with a strong background in frontend and fullstack development. Experienced in delivering high-performance web solutions with dedication and efficiency, quickly delivering quality work. Demonstrated ability to mentor junior developers. Enthusiastic about developing personal projects and continuously enhancing technical skills

WORK EXPERIENCE

Schneider Electric

Software Engineer

Louisville, KY

Jan 2025 – Apr 2026

- Developed numerous Angular features, including components creation, services and utils implementation, and routing configuration
- Implemented state management using Signals, combining async/await with RxJS to improve maintainability and code clarity
- Refactored codebases to enhance readability, structure, and efficiency
- Participated in proposing and refining design and feature improvements based on UX/UI considerations and development needs
- Integrated multiple RESTful APIs, simplifying complex data flows and improving UI responsiveness
- Built and enforced role-based access control, permissions, and workflow logic on the frontend to ensure consistent authorization
- Contributed to the setup and ongoing evolution of a modern Angular (v19–20) single-page application
- Used AI tools such as Copilot and Cursor to accelerate development, improve code quality, and maintain architectural consistency
- Guided non-technical team members on Angular and software development concepts, including component structure and event-driven behavior, helping them better understand application functionality

JP Global Digital

Front-End Engineer

Miami, FL

Nov 2021 – June 2024

- Leader of the frontend development team in a 3D interactive viewer web application
- Refactor of legacy authentication flows: sign up, sign in with two factor authentication, reset password
- Implemented a dashboard to provide easy access to the customers projects
- Developed an analytics page for customers to get insights of projects and their company
- Created a collapsible sidebar capable of containing thousands of elements at high performance and optimal resource usage requested by a major client as part of a contract negotiation
- Mentor of junior frontend developers. Pair programming. Code reviews. Continuous feedback

BP Developments

Full-Stack Developer

Caracas, Venezuela

Jan 2021 – Oct 2021

- Responsible of creating a CRM web application
- Created authentication flows: sign up, sign in integrated with Google Authenticator, reset password
- Developed several modules: users, leads, contacts and communications (SMS, email and live chat)

Universidad Simón Bolívar

Software Developer

Caracas, Venezuela

Jan 2020 – Dec 2020

- Developed a web application to help the university community to get car rides from and to the campus

EDUCATION

Universidad Simón Bolívar

Bachelor of Science in Computer Engineering

Caracas, Venezuela

Certifications

- Programming for the Web with JavaScript

edX – University of Pennsylvania

- CS50's Web Programming with Python and JavaScript
- Single Page Web Applications with AngularJS
- Learn React
- React Testing Library with Jest / Vitest

edX – Harvard University
Coursera – Johns Hopkins University
Codecademy
Udemy

SKILLS

Technical skills

TypeScript, JavaScript, Angular, React, Redux, Vue, Vuex, Vuetify, Material UI, HTML, CSS, NodeJS, MongoDB, Jest, Vite, Vitest, AngularJS, Python, Django, Java, C#, ASP.NET, Websockets, Git, Jira, Azure, Heroku, Firebase, MongoDB Atlas, Copilot, Cursor

Languages

English, Spanish
